## Human Interferon $\alpha$ 2b Gel

### Product Name

Generic name: Human Interferon  $\alpha$ 2b Gel

Trade name: Yallaferon®

### Ingredient

Human Interferon  $\alpha$ 2b

### Description

This product is a transparent hydrogel.

### Indication

1. Treatment of cervical erosion.
2. Treatment of condyloma acuminatum, herpes zoster, herpes labialis, and herpes genitalis.

### Strength

(1) 5g/tube ( $1.0 \times 10^5$  IU/g)    (2) 10g/tube ( $1.0 \times 10^5$  IU/g)

### Dosage and administration

1. Treatment of cervical erosion: Administer medication on the third day after menstruation is completed, once every other day with 1 gram, taking 6-10 times as a treatment cycle or as directed by doctor. Instructions: Using it at bedtime is recommended. After cleaning the vulva, take a gynecological drug dispenser, put on the rubber sleeve and pull the inner core outward to the tick mark so that the pusher is upright. Apply Yallaferon on the top of the pusher (1 gram), keep the gynecological drug dispenser upright, take lying position comfortably and raise the buttocks high, place the gynecological drug dispenser gently into the vagina deep to the ankle, and press the pusher to plug all the gel in. After injection, take out the gynecological drug dispenser, take off the rubber sleeve and discard it. For details on how to use and clean the gynecological drug dispenser, see the instruction manual of the gynecological drug dispenser attached to the package.

2. Treatment of viral skin diseases: Apply to the affected area 4 times daily. Massage the affected area for 2-3 minutes after application to help the drug absorption. Duration: 6 consecutive weeks for condyloma acuminata, 10 consecutive days for herpes zoster and 7 consecutive days for herpes labialis and herpes genitalis .
