

Livaracine®
Nadroparin Calcium
For Injection

Product Name

Generic name: Nadroparin Calcium for Injection

Trade name: Livaracine®

Strength

(1) 4100 AXa IU ; (2) 6150 AXa IU

Indication

In surgery, it is used in cases of moderate to high risk of venous thrombosis.

Treatment of established venous thrombosis.

Combined with aspirin for the treatment of unstable angina and non-Q-wave myocardial infarction in the acute phase.

Prevention of blood clot formation during extracorporeal circulation in hemodialysis.

Dosage and administration

When used, add 0.4ml (4100 AXa IU) or 0.6ml (6150 AXa IU) of sterile water for injection to dissolve.

In prophylaxis and treatment, nadroparin calcium should be administered by subcutaneous injection. In hemodialysis, the drug is administered by intravascular injection. It cannot be used for intramuscular injection.

During spinal anesthesia, epidural anesthesia, or lumbar puncture, the timing of administration of nadroparin calcium should follow special precautions (see [precautions]).

Package

Controlled vial packaging, 12 vials/box.
